Marcelo Queiroga @mqueiroga2 · 18 de jan

Em resposta a @mqueiroga2

Durante a entrevista, eu disse exatamente que “há cerca de 4 mil óbitos onde há uma comprovação de uma relação causal com a aplicação da vacina”. A fala está correta. Foram notificados 3.934 óbitos relacionados a vacinação (1,7 mortes por 100 mil doses).

634 863 3.279

Marcelo Queiroga @mqueiroga2 · 18 de jan

Pelos dados do MS, apenas 13 casos tiveram relação direta comprovada com a vacina contra a COVID-19. Isso tbm está correto.

As notificações ocorrem quando há óbitos em até 30 dias após a aplicação das doses por causas similares às detectadas como efeitos adversos da vacinação.

COVID-19 Vaccines: Scientific Proof of Lethality

Published: 5 January 2022 at <https://www.saveusnow.org.uk/covid-vaccine-scientific-proof-lethal>

One Thousand Scientific Studies Prove That the COVID-19 Vaccines Are Dangerous, and All Those Pushing This Agenda Are Committing the Indictable Crime of Gross Misconduct in Public Health

Just over 12 months from deployment of the COVID 19 emergency use experimental vaccines, scientific studies in the thousands, and reports of criminal complaints of assault and murder from the illegal, unlawful use of biochemical poisons made to police forces around the country, verify an assault on an unsuspecting UK population. Irrefutable science shows that the COVID 19 vaccine is not safe and not effective in limiting transmission or infection from the SARS-CoV-2, coronavirus pathogens.

Os próprios termos de consentimento informado da Pfizer revela que a vacina contra o Covid-19 não é “segura e eficaz”

News story *TheExpose.uk*

Increase in hepatitis (liver inflammation) cases in children under investigation

The UK Health Security Agency (UKHSA) has recently detected higher than usual rates of liver inflammation (hepatitis) in children. Similar cases are being assessed in Scotland.

Pfizer study suggests the Covid-19 Vaccine is to blame for huge increase in Hepatitis among Children as UK Government launches urgent investigation

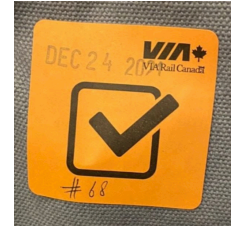

Karina Michelin

A Pfizer também está ciente da possibilidade de pecado antigênico original e priming patogênico (respostas imunes indesejadas que deixam a pessoa pior em resposta a um vírus do que se não tivesse feito nada). A Pfizer adverte aos pais dos participantes dos ensaios clínicos que **“ainda não se pode descartar que a vacina do estudo possa tornar uma doença COVID-19 posterior mais grave”**. O FDA e o CDC fazem um grande esforço para esconder essa informação enquanto proclamam as palavras “seguro e eficaz” repetidamente como um mantra. ([aqui](#))

Comparing SARS-CoV-2 natural immunity to vaccine-induced immunity: reinfections versus breakthrough infections

Sivan Gazit, Roei Shlezinger, Galit Perez, Roni Lotan, Asaf Peretz, Amir Ben-Tov, Dani Cohen, Khitam Muhsen, Gabriel Chodick, Tal Patalon

doi: https://doi.org/10.1101/2021.08.24.21262415

Conclusions This study demonstrated that natural immunity confers longer lasting and stronger protection against infection, symptomatic disease and hospitalization caused by the Delta variant of SARS-CoV-2, compared to the BNT162b2 two-dose vaccine-induced immunity. Individuals who were both previously infected with SARS-CoV-2 and given a single dose of the vaccine gained additional protection against the Delta variant.

SARS-CoV-2 Delta variant mutation sites

Conclusion

According to the current study, variations in the mutation sites of SARS-CoV-2 variants are to blame for the unique global outbreak of COVID-19. The delta form has an unique T478K mutation that may be responsible for its increased transmissibility, severity, and vaccination escape.

Reduced interferon antagonism but similar drug sensitivity in Omicron variant compared to Delta variant of SARS-CoV-2 isolates

[Denisa Bojkova](#), [Marek Widera](#), [Sandra Ciesek](#), [Mark N. Wass](#) , [Martin Michaelis](#)  & [Jindrich Cinatl Jr](#)

Omicron (B.1.1.529), is a heavily mutated and highly contagious SARS-CoV-2 variant, which is currently causing large outbreaks in many countries. Protection provided by current vaccines is substantially reduced against Omicron.^{1,2} Moreover, many immunocompromised individuals cannot effectively be protected by vaccines.³ Hence, antiviral therapies will be essential to protect the most vulnerable individuals from severe COVID-19.

Overview

This is a guidance document for countries and implementing partners on the technical requirements for developing digital information systems for issuing standards-based interoperable digital certificates for COVID-19 vaccination status, and considerations for implementation of such systems, for the purposes of continuity of care, and proof of vaccination.

- Digital documentation of COVID-19 certificates: vaccination status: web annex A: DDCC:VS core data dictionary, 27 August 2021
- Digital documentation of COVID-19 certificates: vaccination status: technical specifications and implementation guidance, web annex B: technical briefing, 27 August 2021

Australian public health chief says Covid contact tracing is part of 'New World Order'

Australian public health chief Dr. Kerry Chant said Covid contact tracing is part of the 'New World Order' during a press conference. Social media has blasted the phrasing 'New World Order' which began trending on Twitter with the tech giant flagging the term as part of an 'unfounded conspiracy theory'. Dr. Chant said: "We will be looking at what contact tracing looks like in the New World Order...yes it will be pubs and clubs and other things if we have a positive case there."

Vaccine Passports

Vaccine passes or immunity passports were once dismissed as [paranoid conspiracy theories](#) that would never be implemented domestically in free societies. But as we learned in 2021, numerous politicians and policymakers first dismissed the idea, only to change direction and impose the invasive and controlling mechanism - under the guise of wanting to open up society from the lockdowns they previously imposed. Despite the lack of an [ethical](#) and [epidemiological](#) basis for such an idea, vaccine passes swept the world in 2021. UK Prime Minister Boris Johnson [opposed](#) domestic COVID passes at the start of the year, and [implemented](#) them by the end of the year. Prime Minister of Canada Justin Trudeau also [opposed vaccination passports](#) calling them “divisive” at the start of the year and later [embraced](#) them. A similar story played out across much of the developed world, what was once written off as a [conspiracy theory](#) is now government policy.

Five ‘conspiracy theories’ that were validated in 2021

Dec 27, 2021 | 05:31 AM

What was once written off as 'conspiracy theory' is now government policy

Microchipping People

Theories around new attempts by governments and tech companies to track the people have been circulating for decades. Since COVID there have been two main theories that involve the concept of implanting microchips in people. The first is that the vaccine itself contains some sort of communication device, this theory has not been proven correct. The second theory was that a vaccine pass or RFID would be implanted in people and be used in order to maintain or restrict people’s freedom of movement. This theory was declared to be [false by Reuters](#) in April 2020.

5G and COVID

At the start of the pandemic, some speculated that COVID did not exist, and the illness was caused and transmitted by 5G - this speculation was with little basis and never proven to be true. At the same time, many were concerned that wireless radiation could cause flu-like symptoms similar to COVID, or that radiation [could depress one’s immune system](#) making people more susceptible to COVID. Did microwave radiation make people sick with COVID-like symptoms? This claim was [fact-checked](#) and dismissed as “unfounded” since there is “no evidence that 5G is harmful to humans”. The BBC, quoting a scientist, called the claim [“complete rubbish”](#). Facebook’s [COVID-19 policy](#) still prohibits such claims on its platform.

The Origins of COVID

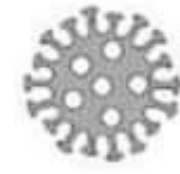

The origins of the COV-SARS2 were straightforward as far as the establishment was concerned - the virus passed from an animal (likely a bat) to a human in the Wuhan wet market. This was the assessment made by the [World Health Organization \(WHO\)](#) in early 2020. To further solidify the theory of the natural origin, a group of scientists published a [firm statement](#) in The Lancet, saying that they “strongly condemn conspiracy theories suggesting that COVID-19 does not have a natural origin” and that scientists “overwhelmingly conclude that this coronavirus originated in wildlife.” Supported by [big tech’s censorship](#), this theory was established as the undebatable truth.

‘COVID Camps’

The idea that governments were planning to build quarantine camps was another rumor that was [circulating in 2020](#). The fear was that the government would detain people, even healthy people into internment camps - this was written off by the media and politicians as [just more ‘disinformation’](#). By late 2020 questions were being raised in the Ontario legislature, in Canada by [MPP Randy Hillier about camps](#). He was jeered, shouted out with calls for him to sit down, and his microphone turned off. In Australia, camps were talked about, but only for travelers - anyone who said they may be used for others was branded as a conspiracy theorist and [spreaders of fake news](#). As time went on these camps were built and opened both in [Canada](#) and [Australia](#). The facilities in Canada were not used just for travelers or just for people who were looking to ‘voluntarily isolate’ but rather included other Canadians who were detained due to their [non-compliance](#) with COVID regulations.
